(54) METAL COORDINATION COMPOUND, POLYMER COMPOSITION, AND ORGANIC ELECTROLUMINESCENT ELEMENT USING THEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a metal coordination compound which emits light covering from green to red and has a long drive life, to provide a polymer composition, and to provide an organic electroluminescent element using them.

SOLUTION: The metal coordination compound is represented by any one of formulae (1) to (6) [wherein M is Ir, Rh, Ru, Os, Pd, or Pt; n is 2 or 3; another bidentate ligand is further bonded to M when M is Ir, Rh, Ru, or Os and n is 2; ring A is a cyclic compound containing a nitrogen atom bonded to M; X1 to X7 are each independently a substituent selected from the group consisting of -H, -OH, -R1, -OR2, -SR3, -OCOR4, -COOR5, -SiR6R7R8, -NH2, -NHR9, and -NR10R11

(wherein R1 to R11 are each an alkyl group, an aryl group, a heteroaryl group, or an aralkyl group), provided that ring A may have a substituent similar to a group defined in X1 to X7].
